

FENDER ELEMENT MRV300

Technical data

General description

The fender element is an efficient buckling type fender. It has a sophisticated trapezoidal geometry which under compression, buckles into a distinctive "S" shape for optimum performance.

The fixings are placed on the neutral axis to keep static and dynamic bolt loads to a minimum. The fender elements are compression moulded under high pressure to secure a solid, homogeneous rubber fender without pores, air enclosures or cracks. The metal mounting flanges are chemically bonded to and totally encapsulated within the rubber, to eliminate any risk of corrosion.

Dimension

Element	A	B	C
MV300 x 600	600	150	300
MV300 x 900	900	150	2 x 300
MV300 x 1200	1200	150	3 x 300
MV300 x 1500	1500	150	5 x 300

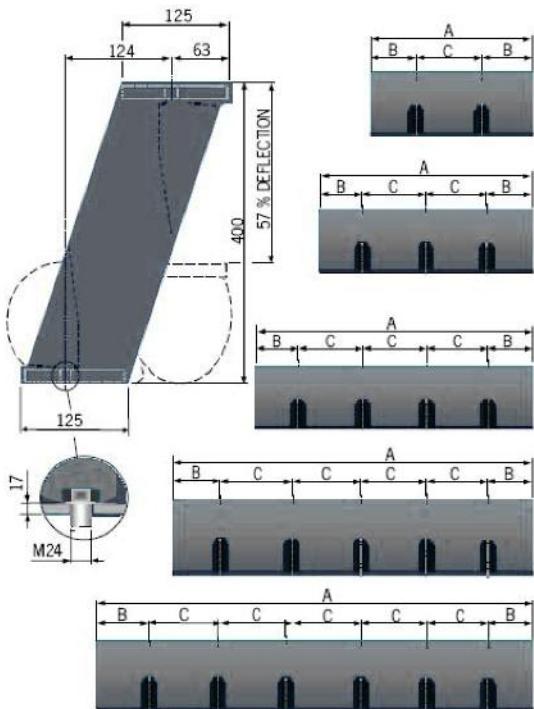

Performance

Element	compound A (velocity 0.30m/s)		compound B (velocity 0.30m/s)	
	E(Tm.)	R(T.)	E(Tm.)	R(T.)
MV300 x 600	1.3	9.8	0.9	6.8
MV300 x 900	2.0	14.7	1.4	10.3
MV300 x 1200	2.6	19.6	1.8	13.7
MV300 x 1500	3.3	24.5	2.3	17.2
